

Introducing spectrally resolved BSDF and other updates on the PG2 gonio-photometer

Peter Apian-Bennewitz

pab advanced technologies Ltd
info@pab.eu

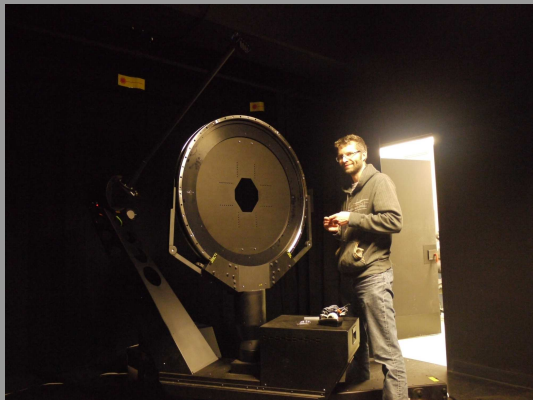

13th *Radiance* workshop, London

PG2 gonio-photometer layout

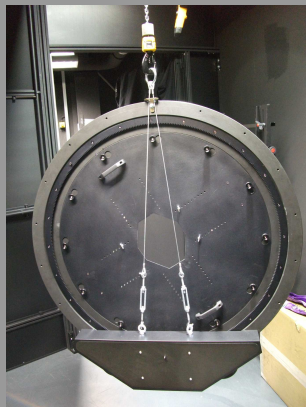

PG2 news 2014: *phirot* sample mount

large sample mount with rotation (ϕ_{in}), 1m radius

LBNL 2013

FhG-ISE 2014

standard sample diameter up to 760mm, adjustable mounting of different sizes

PG2 news 2014: sensor for retro-reflecting direction

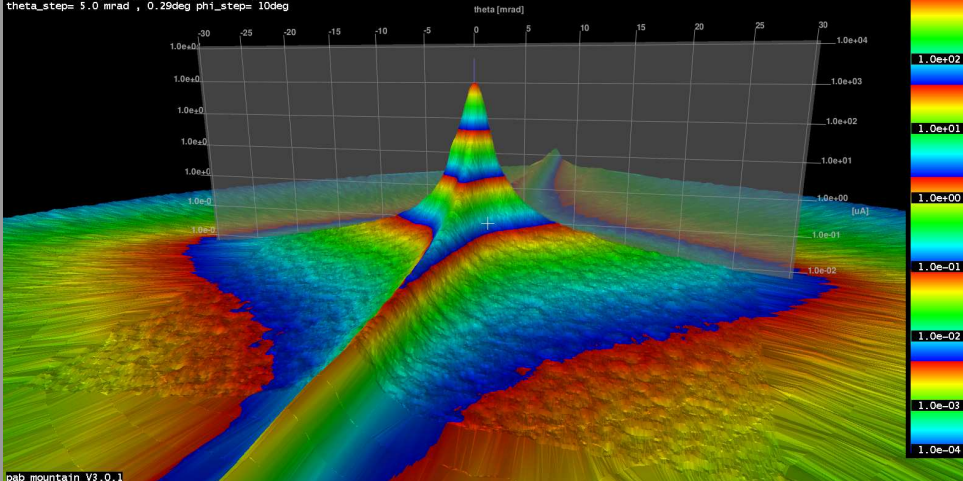

closest angle 0.3° to incident direction

PG2 news 2014: high angular resolution with HeNe

comparison of solar mirrors (for DLR):

```
pgdb pabpg id=3556 "DLR-ALU1" "DLR-ALU1" in=(15,0) "HeNe-Laser" (0,3) (0,2) (0,1) (0,0) det,f=300,a=0.02  
n=406798/299214 col=daq min=2.33e-04[uA] max=1.04e+03[uA] int=1.88e-03 front,refl log deca 9  
zenith=(15.1511,178.689) tmax=1.72 zstripes=5  
theta_step= 5.0 mrad , 0.29deg phi_step= 10deg
```

solved with 1mm aperture (1m distance), filtered, focussed 7mW HeNe, special drive software

- PG2 at SERIS, Singapore moved to HSLU, Switzerland
Prof Wittkopf & crew, *CC Envelopes and Solar Energy (EASE)*

other bits of PG2 news:

- PG2 at SERIS, Singapore moved to HSLU, Switzerland
Prof Wittkopf & crew, *CC Envelopes and Solar Energy (EASE)*
- new PG2 replaced author's 1989 machine at Fraunhofer ISE
Tilman Kuhn, Bruno Bueno & crews

other bits of PG2 news:

- PG2 at SERIS, Singapore moved to HSLU, Switzerland
Prof Wittkopf & crew, *CC Envelopes and Solar Energy (EASE)*
- new PG2 replaced author's 1989 machine at Fraunhofer ISE
Tilman Kuhn, Bruno Bueno & crews
- custom measurement for clients @ pab Ltd
that keep me entertained and paid

other bits of PG2 news:

- PG2 at SERIS, Singapore moved to HSLU, Switzerland
Prof Wittkopf & crew, *CC Envelopes and Solar Energy (EASE)*
- new PG2 replaced author's 1989 machine at Fraunhofer ISE
Tilman Kuhn, Bruno Bueno & crews
- custom measurement for clients @ pab Ltd
that keep me entertained and paid
- and:
first working spectral measurement heads in service:
VIS and IR

BSDF, the formal way, (with wavelength)

Definition

$$\mathcal{L}_{out}(\vec{x}_{out}, \lambda) = \int_{\vec{x}_{in}}^{\Omega_{in}=2\pi} \mathbf{BSDF}(\vec{x}_{in}, \vec{x}_{out}, \lambda) \mathcal{L}_{in}(\vec{x}_{in}, \lambda) \cos(\theta_{in}) d\Omega_{in}$$

- 4 variables: $\mathbf{BSDF}(\vec{x}_{in}, \vec{x}_{out}) = \mathbf{BSDF}(\theta_{in}, \phi_{in}, \theta_{out}, \phi_{out})$
plus (optionally) wavelength λ

\mathcal{L}_{out} outgoing, \mathcal{L}_{in} incident radiance, λ wavelength, $\int_{\vec{x}_{in}}^{\Omega_{in}=2\pi}$ integral over hemisphere,
 Ω_{in} inf. solid angle, see talk at 2010 workshop for more math

BSDF, the formal way, (with wavelength)

Definition

$$\mathcal{L}_{out}(\vec{x}_{out}, \lambda) = \int_{\vec{x}_{in}}^{\Omega_{in}=2\pi} \mathbf{BSDF}(\vec{x}_{in}, \vec{x}_{out}, \lambda) \mathcal{L}_{in}(\vec{x}_{in}, \lambda) \cos(\theta_{in}) d\Omega_{in}$$

- 4 variables: $\mathbf{BSDF}(\vec{x}_{in}, \vec{x}_{out}) = \mathbf{BSDF}(\theta_{in}, \phi_{in}, \theta_{out}, \phi_{out})$
plus (optionally) wavelength λ
- ideal white diffuse surface: $\mathbf{BSDF}(\vec{x}_{in}, \vec{x}_{out}, \lambda) = \text{const}$

\mathcal{L}_{out} outgoing, \mathcal{L}_{in} incident radiance, λ wavelength, $\int_{\vec{x}_{in}}^{\Omega_{in}=2\pi}$ integral over hemisphere,

Ω_{in} inf. solid angle, see talk at 2010 workshop for more math

BSDF, the formal way, (with wavelength)

Definition

$$\mathcal{L}_{out}(\vec{x}_{out}, \lambda) = \int_{\vec{x}_{in}}^{\Omega_{in}=2\pi} \mathbf{BSDF}(\vec{x}_{in}, \vec{x}_{out}, \lambda) \mathcal{L}_{in}(\vec{x}_{in}, \lambda) \cos(\theta_{in}) d\Omega_{in}$$

- 4 variables: $\mathbf{BSDF}(\vec{x}_{in}, \vec{x}_{out}) = \mathbf{BSDF}(\theta_{in}, \phi_{in}, \theta_{out}, \phi_{out})$
plus (optionally) wavelength λ
- ideal white diffuse surface: $\mathbf{BSDF}(\vec{x}_{in}, \vec{x}_{out}, \lambda) = \text{const}$

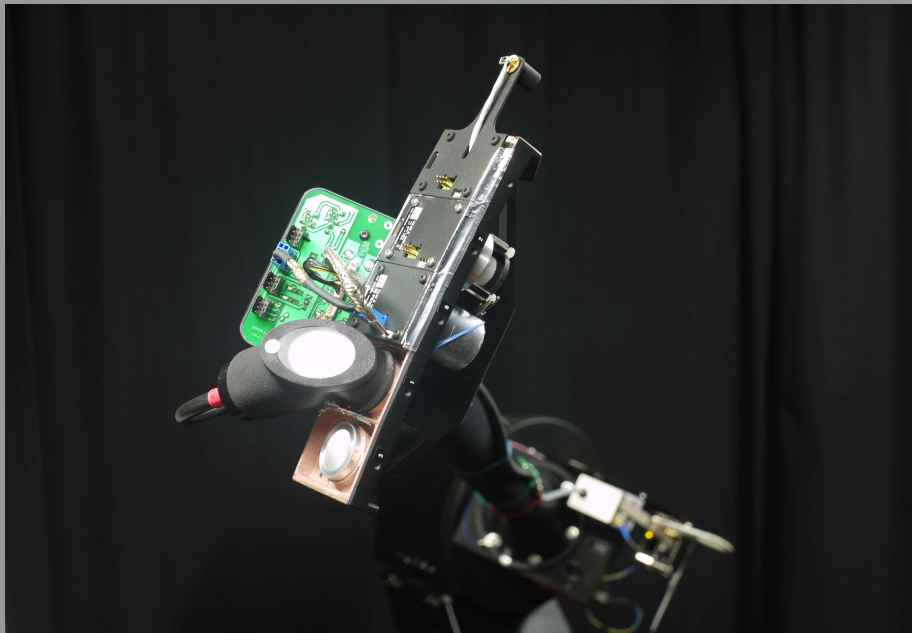

- often applied approximation:

$$\mathbf{BSDF}(\theta_{in}, \phi_{in}, \theta_{out}, \phi_{out}, \lambda) = \underbrace{\mathbf{BSDF}^*(\theta_{in}, \phi_{in}, \theta_{out}, \phi_{out})}_{\text{angular part}} \underbrace{\rho^*(\lambda)}_{\text{spectral}}$$

\mathcal{L}_{out} outgoing, \mathcal{L}_{in} incident radiance, λ wavelength, $\int_{\vec{x}_{in}}^{\Omega_{in}=2\pi}$ integral over hemisphere,

Ω_{in} inf. solid angle, see talk at 2010 workshop for more math

spectral BSDF, prototype hardware

How to choose a neat compact spectrometer

- quality of optics (e.g. internal stray-light, pixel cross-talk)

How to choose a neat compact spectrometer

- quality of optics (e.g. internal stray-light, pixel cross-talk)
- quality of electronics (dynamic range, drift, noise, etc)

How to choose a neat compact spectrometer

- quality of optics (e.g. internal stray-light, pixel cross-talk)
- quality of electronics (dynamic range, drift, noise, etc)
- mechanical mount of module

How to choose a neat compact spectrometer

- quality of optics (e.g. internal stray-light, pixel cross-talk)
- quality of electronics (dynamic range, drift, noise, etc)
- mechanical mount of module
- quality of optical coupling to PG2

How to choose a neat compact spectrometer

- quality of optics (e.g. internal stray-light, pixel cross-talk)
- quality of electronics (dynamic range, drift, noise, etc)
- mechanical mount of module
- quality of optical coupling to PG2
- software: embedding spectrometer into PG2 Linux control

How to choose a neat compact spectrometer

- quality of optics (e.g. internal stray-light, pixel cross-talk)
- quality of electronics (dynamic range, drift, noise, etc)
- mechanical mount of module
- quality of optical coupling to PG2
- software: embedding spectrometer into PG2 Linux control
- dealing with parameters intrinsic to the technology of compact spectrometers

How to choose a neat compact spectrometer

- quality of optics (e.g. internal stray-light, pixel cross-talk)
- quality of electronics (dynamic range, drift, noise, etc)
- mechanical mount of module
- quality of optical coupling to PG2
- software: embedding spectrometer into PG2 Linux control
- dealing with parameters intrinsic to the technology of compact spectrometers

How to understand and check spectral BSDF

- introduces yet another variable for the BSDF

How to choose a neat compact spectrometer

- quality of optics (e.g. internal stray-light, pixel cross-talk)
- quality of electronics (dynamic range, drift, noise, etc)
- mechanical mount of module
- quality of optical coupling to PG2
- software: embedding spectrometer into PG2 Linux control
- dealing with parameters intrinsic to the technology of compact spectrometers

How to understand and check spectral BSDF

- introduces yet another variable for the BSDF
- adding neat new display and functions to `mountain` program

How to choose a neat compact spectrometer

- quality of optics (e.g. internal stray-light, pixel cross-talk)
- quality of electronics (dynamic range, drift, noise, etc)
- mechanical mount of module
- quality of optical coupling to PG2
- software: embedding spectrometer into PG2 Linux control
- dealing with parameters intrinsic to the technology of compact spectrometers

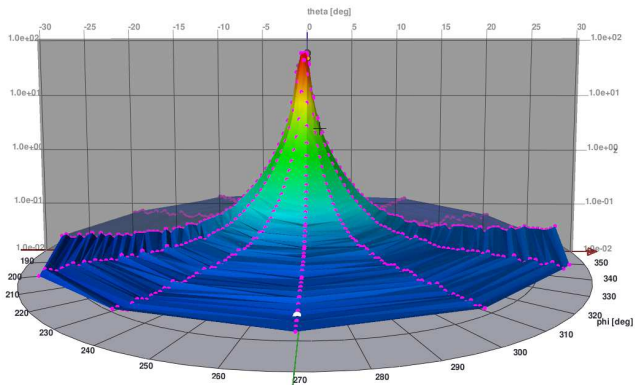

How to understand and check spectral BSDF

- introduces yet another variable for the BSDF
- adding neat new display and functions to `mountain` program
- new challenge to Radiance: handling spectral BSDF.

spectral BSDF mountain display

yellow, glossy paint, $\theta_{in} = 30^\circ$, @490nm, standard display

```
filename="yellow-gloss8.array"  
n=741/741 col=25 [489.172] min=1.28e-02 max=5.96e+01 int=9.05e-02 front,refl log deca 8  
tmax=30.00  
theta_step= 5deg , 87.3 mrad phi_step= 10deg  
sample_label="yellow1-gloss" sample_name="yellow glossy paint"
```

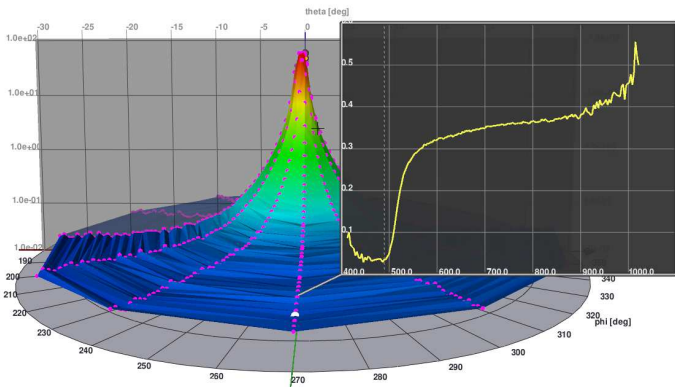

pab mountain V3.0.1

spectral BSDF mountain display

yellow, glossy paint, $\theta_{in} = 30^\circ$, @490nm, spectrum off-peak

```
filename="yellow-gloss8.array"  
n=741/741 col=25 [489.172] min=1.28e-02 max=5.96e+01 int=9.05e-02 front,refl log deca 8  
tmax=30.00  
theta_step= 5deg , 87.3 mrad phi_step= 10deg  
sample_label="yellow1-gloss" sample_name="yellow glossy paint"
```

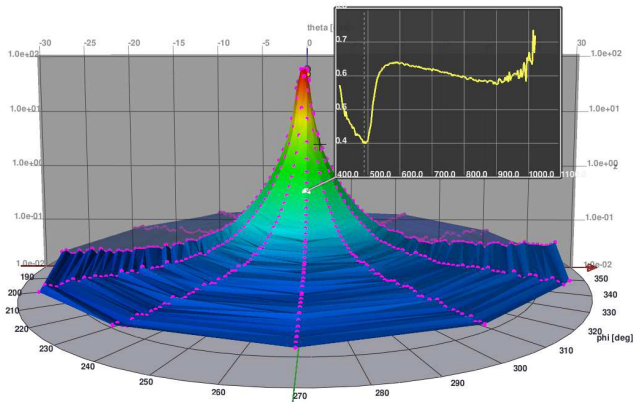

pab mountain V3.0.1

spectral BSDF mountain display

yellow, glossy paint, $\theta_{in} = 30^\circ$, @490nm, spectrum at base of peak

```
filename="yellow-gloss8.array"  
n=741/741 col=25 [489.172] min=1.28e-02 max=5.96e+01 int=9.05e-02 front,refl log deca 8  
tmax=30.00  
theta_step= 5deg , 87.3 mrad phi_step= 10deg  
sample_label="yellow1-gloss" sample_name="yellow glossy paint"
```

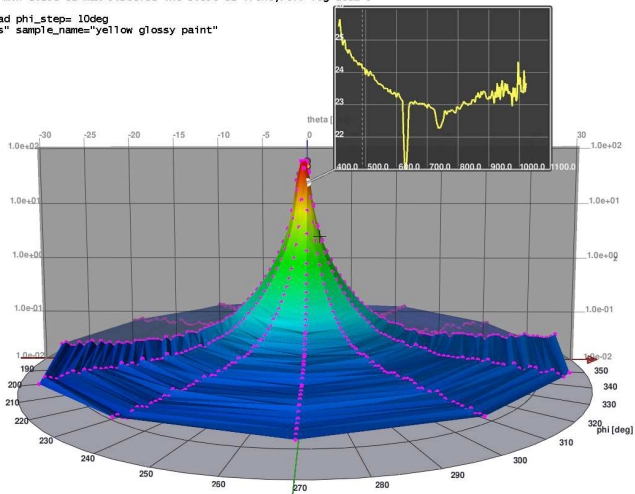

pab mountain V3.0.1

spectral BSGF mountain display

yellow, glossy paint, $\theta_{in} = 30^\circ$, @490nm, spectrum at peak

```
filename="yellow-gloss8.array"  
n=741/741 col=25 [489.172] min=1.28e-02 max=5.96e+01 int=9.05e-02 front,refl log deca 8  
tmax=30.00  
theta_step= 5deg , 87.3 mrad phi_step= 10deg  
sample_label="yellow1-gloss" sample_name="yellow glossy paint"
```

pab mountain V3.0.1

spectral BSDF graph of inplane scattering

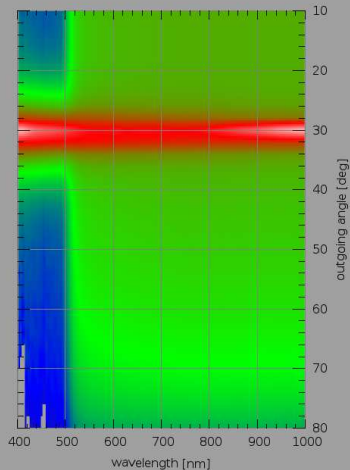

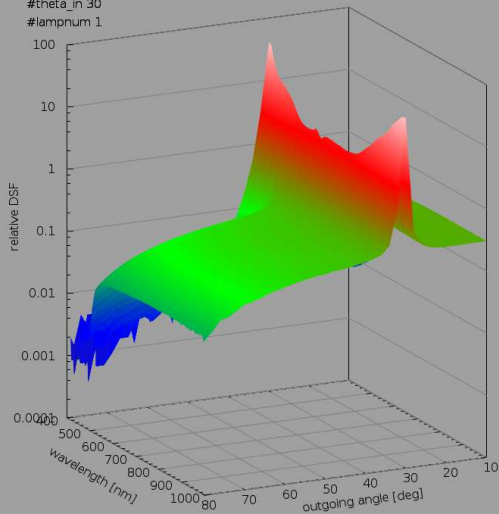

yellow, glossy paint, $\theta_{in} = 30^\circ$, $\phi_{out} = 180^\circ$

```
#PG2_sample_label="yellow1-gloss"
```

```
#theta_in 30
```

```
#lampnum 1
```

spectral signal, inplane,
"yellow-gloss.2.dat"

conclusion:

- PG2 is a fairly configurable machine (*... get one today!*)
- spectral BSDF: lots of fun, even for "simple" materials
- works for more complex scattering too
- inspires more questions on modelling and materials

conclusion:

- PG2 is a fairly configurable machine (*... get one today!*)
 - spectral BSDF: lots of fun, even for "simple" materials
 - works for more complex scattering too
 - inspires more questions on modelling and materials
-
- more BSDF math at 2010 pab workshop talk
 - more measurement details: <http://www.pab.eu>
-
- happy rendering
 - thank you for your attention
